In partnership with

Cot video assessments and online product demonstrations

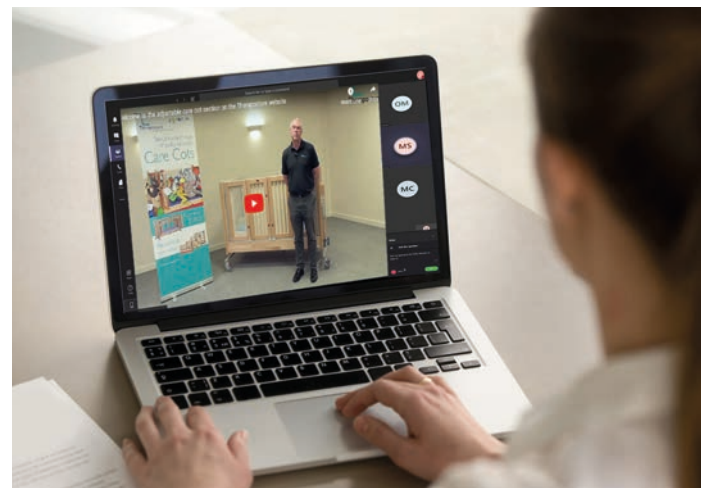

Making assessment-based equipment provision easier and more efficient for all, with our free video consultation service

- Easy, fast and safe for all healthcare professionals and families
- Opportunity for us to see the right place for a child's cot or bed in a client's home
- No need for home visits or travel
- Great way to include family members, carers and therapists in one call
- Easy-to-use appointment calendar

As an alternative to home visits, assessments and product demonstrations can be provided remotely by our experienced equipment experts and Trusted Assessors.

This means we can see the environment where equipment will be used and personally discuss and understand an individual's situation. Products are demonstrated via video link from our demonstration room and in context to each person's needs.

Occupational Therapists also benefit from this service as they can join the live session – ensuring all stakeholders are included whilst avoiding any travel time.
